## **RESEARCH FIELDS**

---

- **Application of Multi-body dynamics in biomechanics:** Dynamical analysis of systems with multiple degrees of freedom with the use of MSC.ADAMS. The method is extended to biomechanical systems, especially on the kinetics (forces between the tibio-femoral and patello-femoral contact surfaces) and kinematics (roll-slide between the contact surfaces) of the human knee joint.
- **Reconstructional design/development of knee prostheses:** The process of laser scanning an actual prosthesis, through the analysis of the raw-data, up to the creation of the import-ready geometrical model, which can be developed and modified by the use of several CAD systems. The modified prosthesis models can be directly imported into the MSC.ADAMS for kinematic/kinetic simulation and virtual testing.
- **Computational Fluid Dynamics (CFD):** Numerical analysis of airfoil models.
